

HDC-2A

4K HDMI Conditioner

Despite the absence of buttons, dials, and dipswitches, the **HDC-2A** is a powerful problem solver. Our 4K Conditioner, using proprietary **Transmotive Engineering** technology, is designed to stabilize and correct HDMI signals that may have been compromised by nonconforming HDMI devices. Many HDMI products may not present a signal with correct EDID, “handshake,” or HDCP protocols. As a result, you may experience intermittent or unsatisfactory display. We recognize that and solve most of these issues by establishing a proper “handshake” at the input to this device (with your source) so that your display will operate reliably. This Conditioner/HDMI Fixer passes ARC (Audio Return Channel) and HEC (Home Ethernet Connection). The **HDC-2A** now includes a Contact Closure to provide feedback to a control system. It is powered by an included 5VDC Power Supply. In addition, we provide a USB port for future firmware updates.

HDC-2A Product Highlights:

- Filters and Conditions Poor/Compromised HDMI Signals
- Ensures Communication of Proper EDID and HDCP Protocol Between Devices
- Features a Contact Closure to Provide Feedback to a Control System
- Three (3) Year Warranty

Included In Kit:

- (1) HDC-2A HDMI Conditioner
- (1) Phoenix Connector
- (1) 5VDC Power Supply
