QuikPush™ Customer Terminal - Large

Designed for indoor use, the QP-LCT allows for convenient routing, storage and interface of optical fiber from the network provider to the end user's Optical Network Terminal. This terminal is typically located inside the customer dwelling and connects to the Network Access Point using PPC's pre-terminated QuikPush Drop Cable. The QP-LCT is an ideal complement to the QuikPush drop cable by allowing operators to minimise their range of drop cable inventory. Storing up to 15 metres (50 feet) of excess 3mm Miniflex cable makes the QP-LCT a versatile slack storage solution for connectorized drop cable.

The large QuikPush customer terminal (QP-LCT) from PPC is a highly practical and compact termination point for FTTH deployments.

Advantages:

- Allows for 100% splice-less FTTH installations
- IP55 protection from dust and water
- SC and LC QuikPush compatible
- Robust hinged front cover for quick and easy installation
- Slack cable storage for up to 15 metres (50 feet) of Ø3mm Miniflex cable
- Supplied with wall fixings and cable grommets

Applications

- Fiber To The Home
- Multi-Dwelling Units
- Premise installations
- Telecommunications

Compatibility List:

- All PPC and industry standard cable
- QuikPush™ cable connector (SC & LC)

Customer Terminal Information

| Part Number | Connector Adaptor | Size | Weight (10pc pack) | Recommended Slack Storage | Max. Slack Storage | Port Diameter | Operating Temp | Order Pack Quantity |
