

SB-2 Dual Stereo Audio Balun

Many times all you need is a simple device to route Stereo Audio over long distances, but want a high quality, fully shielded, Balanced-Line for best hum rejection. Our Stereo Baluns use the highest quality transformers to convert unbalanced/RCA line-level inputs into Balanced Audio signal for transmission over Cat5/6. A second Stereo Balun converts the Balanced Audio back to RCA. At the request of our dealers, the SB-2 extends 2 stereo pair over 1 wire.

These units, sold and used in pairs, are passive and require no power supply. They are good for 100 Meters of CAT5 or CAT6 UTP cable.

1. Rugged shielded aluminum enclosure brushed anodized surface
2. Dual RCA stereo input /ouput
3. RJ-45 jack for UTP connection

SB-2 Specifications
