# Using Shortcuts Guide

(Version 1.0)

Welcome to the "*Using Shortcuts Guide*" for the Murideo SEVEN Generator. Now that you have your own SEVEN Generator, setting it up to work how YOU want is one of the first steps. To help you do that the SEVEN Generator has a verity of customizable shortcuts. We will cover exactly how to set up and use these tools that are prebuilt into the SEVEN Generator.

There are four separate options for shortcuts:

- Keypad Shortcuts
- Test Pattern Shortcuts
- My Resolutions Shortcuts
- Pre-sets on the Keypad

Each shortcut has a different function and method of use, after you set up your shortcuts, they can always be changed later. Setting up and switching shortcuts is so easy on the SEVEN Generator that many will change their shortcuts day to day as needed.
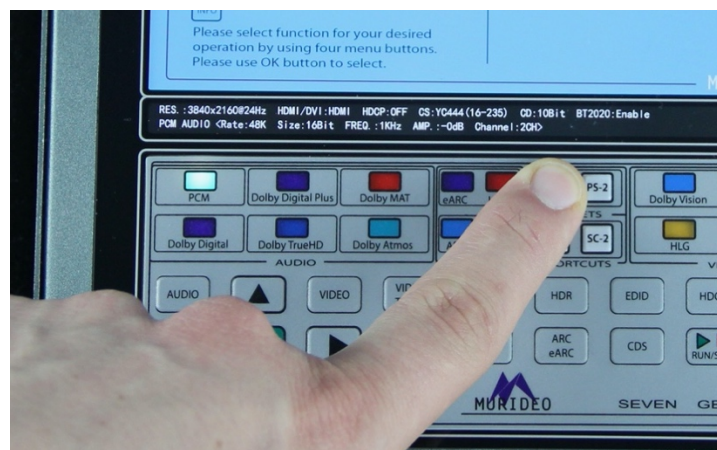

"Presets" on the Keypad

Presets buttons will quickly set your SEVEN Generator to a specified signal that you have previously setup. This allows you to recall a certain resolution, timing, color space, audio signal and test pattern configuration.

How to set up and use your preset button:
1. Navigate through the menu and select a resolution, timing, color space, audio signal and test pattern configuration signal of your choice.
2. Once you have the signal you want press and hold either "PS-1" or "PS-2", after about 4 seconds you will see all signal lights flash on and off. This lets you know you have successfully set up you Preset Button.
3. Press the "PS-1" or "PS-2" to access this preset, no matter what other signal you were working with, pressing these buttons will automatically switch the signal to your preset choices.
